

4K MULTIVIEW COMMANDER

KVM can be so *simple*
Let's connect!
kvm-tec

Softwarefeature für 4K Ultraline DP1.2 im Switching Manager

The 4K Multiview Commander is an additional feature for the 4K KVM Extender. This feature allows video signals from different PCs to be displayed simultaneously on only one 4K screen. With the kvm-tec innovation, the PCs can also be controlled and operated via the kvm-tec transparent USB 2.0 transfer. This feature is unique worldwide. Thanks to the skillful management of USB transmission, kvm-tec has succeeded in making every screen content individually usable. Depending on the mouse position, the USB signals can be routed to the corresponding PC to make the screen content usable. With the 4K Multiview Commander, up to 4 different PCs can be controlled and operated with one 4K monitor, depending on the resolution. Also with different operating systems. This kvm-tec feature enables ergonomic and space-saving work with 4k applications in control and monitoring rooms. The 4K Multiview Commander is available stand alone or in configuration with the Switching Manager.

Operation System independent e.g. Linux, Windows

SOFTWARE-FEATURE

for 4K Ultraline and Matrixline
with Switching Manager

included in the delivery content

www.kvm-tec.com

kvm-tec innovation for controlling
and operating content from 4 different PCs
on only one 4k monitor

From remote (CON) up to 120km/74mi
